

Cancer  
Symptom  
Tracker

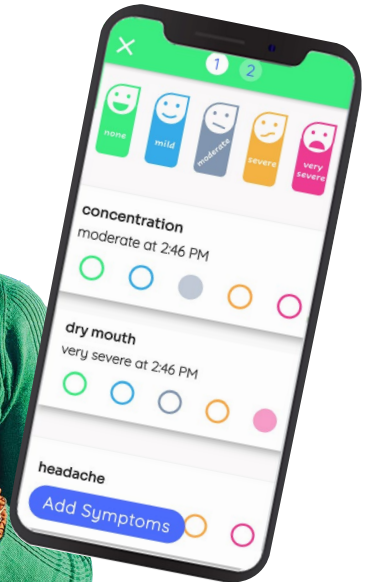

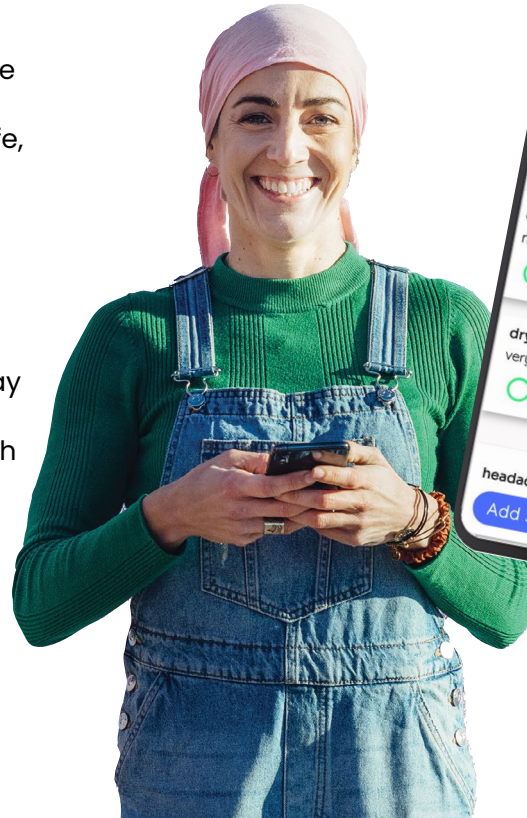

# Let your patient's voice be a part of their success

Studies show that patients who track and share their symptoms with their care team increase engagement in care, report higher quality of life, and experience better outcomes.<sup>1</sup>

However, patients face hurdles to proactively communicate with their care team and seek a solution to ease symptom sharing.

**Cancer Symptom Tracker app** is the simple way for patients to consistently track how they feel and share their symptoms and side effects with their care team.

We enable the power of the patient's voice to help the care team manage symptoms before they become unmanageable.
